

SS-100 AUTOMATIC SLIDE SLEEVING SYSTEM

Pakon sleeving is customer preferred!

Pakon's archival sleeving protects your customer's valuable slides—and your quality reputation.

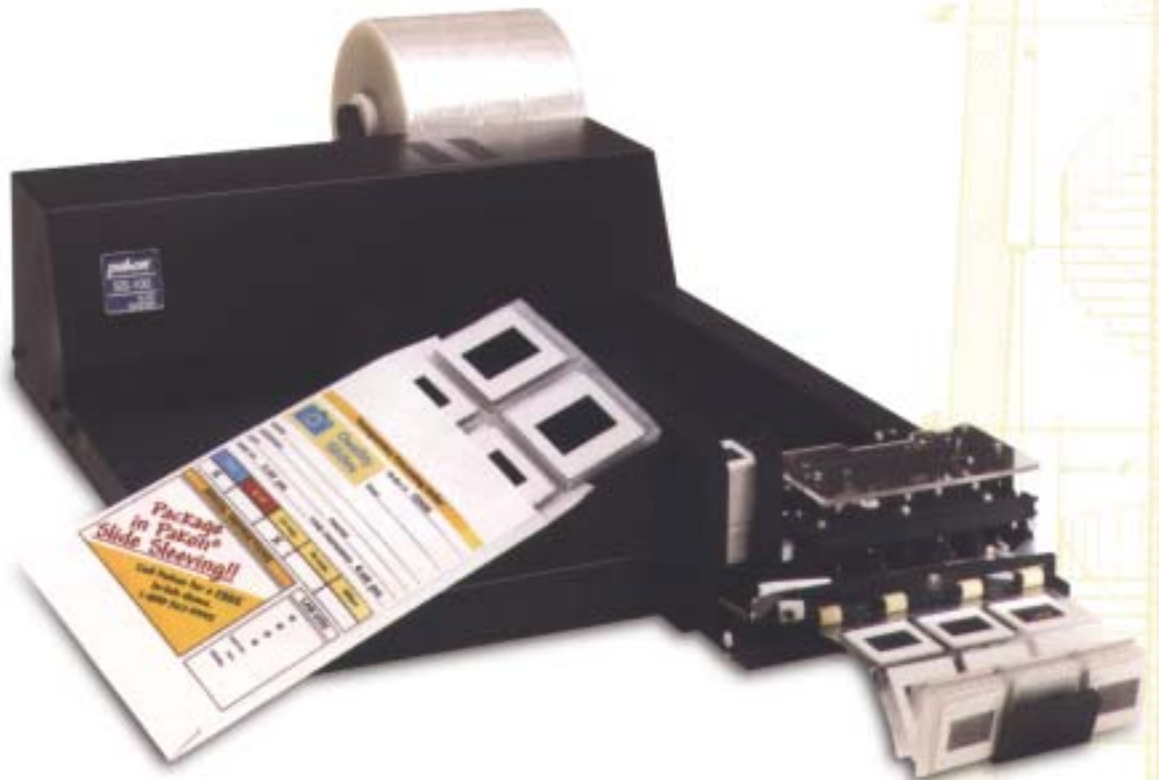

Providing a safe, convenient, and practical way to preserve and view slides, it's no wonder that Pakon sleeving is customer preferred!

The SS-100 Slide Sleeving System automatically inserts mounted slides into individual pockets where they are guarded from the dirt, dust, and fingerprints associated with handling.

Besides demonstrating your commitment to quality, a Pakon slide sleever benefits the lab by being practical, cost efficient, and easy to use.

Used alone as a separate packaging station—or as part of a complete mounting, imprinting, and packaging system—an SS-100 Slide Sleever can improve lab productivity by eliminating the need to load finished slides into bulky boxes.

Pakon sleeving folds flat, taking no more room than a typical print order. And, because an entire order can be viewed at a glance, each slide can be doubled-checked for quality.

Slide sleeving sets you apart from your competition! Sleeving is customer preferred, so packaging slides in Pakon sleeving automatically positions you as a quality leader. This commitment provides real benefit not only to your customers, but to your business, as well—in incremental sales, referrals, and customer loyalty.

Sleeving makes it convenient for counter personnel to review slide orders with your customers—an ideal opportunity to suggest duplicates or enlargements.

500 foot rolls of sleeving will package 330 24-exposure or 220 36-exposure rolls.

Accessory 3-ring tabs and hanging file strips make it easy to organize and store sleeved slides.

- **Packaging costs**—are variable depending on the actual number of slides in an order. Perforations between each row make it easy to remove and separate orders. This means orders of any size can be sleeved with minimal waste.
- **Sleeving material**—requires considerably less space to store in the lab than traditional plastic boxes. And, unlike “knock-down” cardboard boxes, sleeving requires no assembly.

Fully integrated slide station includes mounter, imprinter, and SS-100 Sleeving System.

SS-100 Specifications:

Width: 24" (61 cm)
